Software Technologies for Developing Distributed Systems: Objects and Beyond Douglas C. Schmidt  
Vanderbilt University Abstract A distributed system is a computing system in which a number of components cooperate by communicating over a

### **Software Technologies for Developing Distributed Systems**

Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which then communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal.
