

elements of differentiable dynamics pdf

Centered around dynamics, DCDS-B is an interdisciplinary journal focusing on the interactions between mathematical modeling, analysis and scientific computations.

American Institute of Mathematical Sciences

In the mathematical field of dynamical systems, an attractor is a set of numerical values toward which a system tends to evolve, for a wide variety of starting conditions of the system. System values that get close enough to the attractor values remain close even if slightly disturbed.

Attractor - Wikipedia

In geometry, a normal is an object such as a line or vector that is perpendicular to a given object. For example, in two dimensions, the normal line to a curve at a given point is the line perpendicular to the tangent line to the curve at the point.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Glossary of research economics - econterms

With the growing success of neural networks, there is a corresponding need to be able to explain their decisions – including building confidence about how they will behave in the real-world, detecting model bias, and for scientific curiosity.

In matematica, un attrattore \tilde{A} è un insieme verso il quale evolve un sistema dinamico dopo un tempo sufficientemente lungo. Perché tale insieme possa essere definito attrattore, le traiettorie che arrivano ad essere sufficientemente vicine ad esso devono rimanere vicine anche se leggermente perturbate.
