

molecular cloning a laboratory pdf

Molecular cloning refers to the process of making multiple molecules. Cloning is commonly used to amplify DNA fragments containing whole genes, but it can also be used to amplify any DNA sequence such as promoters, non-coding sequences and randomly fragmented DNA.

Cloning - Wikipedia

In molecular cloning, a vector is a DNA molecule used as a vehicle to artificially carry foreign genetic material into another cell, where it can be replicated and/or expressed (e.g.- plasmid, cosmid, Lambda phages).

Today, it is difficult to imagine a time when our laboratory freezers were not well stocked with restriction enzymes, when DNA sequencing was not possible, or when genes were only accessible to the geneticists and could not be simply cloned out by recombinant DNA technology.

How restriction enzymes became the workhorses of molecular
