

### refraction and lenses section pdf

In optics, refraction is a phenomenon that often occurs when waves travel from a medium with a given refractive index to a medium with another at an oblique angle.

### Refraction - Wikipedia

The refractive index determines how much the path of light is bent, or refracted, when entering a material. This is the first documented use of refractive indices and is described by Snell's law of refraction,  $n_1 \sin \hat{i}_1 = n_2 \sin \hat{i}_2$ , where  $\hat{i}_1$  and  $\hat{i}_2$  are the angles of incidence and refraction, respectively, of a ray crossing the interface ...
